Zarif Rahman Z

B.TECH CSE (CYBER SECURITY) STUDENT

zarifr084@gmail.com • github.com/Zarif029 • linkedin.com/in/zarif-rahman

PROFILE

Cyber security student with a strong interest in reverse engineering, low-level systems, software development, and CTF problem solving. I enjoy building, breaking, and understanding software at a deeper level.

EDUCATION

SRM Institute of Science and Technology
B.Tech — Computer Science & Engineering
Cyber Security Specialization
2025 — 2029

CORE SKILLS

- Java
- C++
- Python
- Machine Learning
- Reverse Engineering
- Ghidra
- Git / GitHub
- Linux Basics

SUMMARY

I am a second-year Computer Science student focused on cyber security, software development, and reverse engineering. My work spans Java and C++ projects, ML experiments, and practical CTF-style security challenges. I enjoy writing clean code while also learning how systems behave under the hood.

EDUCATION

SRM Institute of Science and Technology

2025 – 2029

B.Tech — Computer Science & Engineering (Cyber Security)

Coursework includes Java programming, C++ object-oriented design, machine learning, UML modeling, and data structures. Active in CTF challenges and reverse engineering assignments.

TECHNICAL SKILLS

PROGRAMMING
Java, C++, Python, OOP design, data structures

SECURITY
Reverse engineering, Ghidra, PE analysis, binary exploitation basics

MACHINE LEARNING
scikit-learn, pandas, model evaluation, RNA-Seq analysis

TOOLS & WORKFLOW
Git, GitHub, VS Code, PowerShell, Linux, debugging workflows

PROJECTS

JAVA APPLICATION

HelloApp

2025

Built a progressive Java project covering multiple use cases involving OOP concepts, data storage, and structured project workflow. Developed with a Git-based feature progression approach.

Java · OOP · Git

TOOLS

- VS Code
- PowerShell
- Kali Linux
- Windows Environment
- Git CLI

JAVA APPLICATION

OOPSBannerApp

2025

Created an advanced Java banner renderer using inner classes and HashMap-based character storage, showcasing encapsulation, abstraction, and modular planning.

`Java` `HashMap` `Inner Classes`

GAME / APPLICATION

TicTacToe

2025

Implemented a turn-based game with state management, input validation, and win-condition logic, demonstrating structured design and debugging discipline.

`Java` `Game Logic` `OOP`

SECURITY RESEARCH

ret2win Research Lab

2026

Studied the ret2win exploitation technique and documented practical methodology for hijacking control flow in x86/x64 binaries, with a focus on security concepts and reverse engineering workflows.

`Binary Exploitation` `CTF` `Security`

CERTIFICATIONS & ACTIVITIES

HTB CTF — Reverse Engineering

2026

Participated in reverse engineering challenge workflows involving Windows PE binaries, Ghidra decompilation, COM structures, RTTI, and vtable reconstruction.

INTERESTS

- Reverse engineering and malware analysis fundamentals
- CTF challenges and binary exploitation
- C systems programming and Linux internals
- Advanced Java and JVM-level understanding
